

<i>As you review the student's work, make sure all of these items are present.</i>	Points Possible	Points Earned
The student created a model showing the circulatory and respiratory systems. The main structures of each system that are involved in gas exchange are labeled.	5.0	
The poster uses arrows to demonstrate the flow of oxygen-rich and oxygen-poor blood through each system.	5.0	
The typewritten document includes one paragraph that describes how the circulatory and respiratory systems work together to deliver oxygen to the body's tissues and remove carbon dioxide. It includes the names and functions of specific structures involved in gas exchange. It also explains how interactions between the organ systems contribute to homeostasis.	5.0	
The typewritten document includes a second paragraph that compares the model to the actual organ systems within the body.	3.0	
The poster and the typed paragraphs are free from errors in spelling and grammar.	2.0	
Total	20.0
